

Name:Saurabh Tripathi

PRN NO. : 045

The screenshot displays a JupyterLab environment with two code cells. The first cell, labeled [5], contains a Python program that prints even numbers from a list. The second cell, labeled [12], contains a Python program that prints the file name and full path. The third cell, labeled [26], contains a Python program that prints a pattern of numbers.

Q.1) Write a Python program to print all even numbers from a given list of numbers in the same order. Stop printing if any number that comes after 237 in the sequence is encountered.
Sample numbers list :
numbers = [386, 462, 47, 418, 907, 344, 236, 375, 823, 566, 597, 978, 328, 615, 953, 345, 399, 162, 758, 219, 237, 412, 566, 731, 210, 912, 216, 244, 896, 101, 867, 355, 430]
expected output:
386 462 418 344 236 566 978 328 162 758

```
[5]: numbers = [386, 462, 47, 418, 907, 344, 236, 375, 823, 566, 597, 978, 328, 615, 953, 345, 399, 162, 758, 219, 237, 412, 566, 731, 210, 912, 216, 244, 896, 101, 867, 355, 430]
for num in numbers:
    if num == 237:
        break
    if num % 2 == 0:
        print(num, end=" ")
386 462 418 344 236 566 978 328 162 758
```

Q.2) Write a python program to get the path and name of the file that is currently executing

```
[12]: import os
print("File name:", os.path.basename("D:\001SQL\CTE COMMON TABE EXPRESSION (also ca.txt)"))
print("Full path:", os.path.abspath("D:\001SQL\CTE COMMON TABE EXPRESSION (also ca.txt)"))
```

File name: CTE COMMON TABE EXPRESSION (also ca.txt
Full path: D:\001SQL\CTE COMMON TABE EXPRESSION (also ca.txt)

Q.3) pattern
1
212
32123
4321234
543212345

```
[26]: n=5
for i in range(1,n+1):
    print(" "*i, end=" ")

    for j in range(i,0,-1):
        print(j, end=" ")
    for j in range(2,i+1):
        print(j, end=" ")
    print()
```

JupyterLab Python 3 (ipykernel)

```
[26]: n=5
      for i in range(1,n+1):
          print("*(n-1),end=" " ")

          for j in range(i,0,-1):
              print(j,end=" ")
          for j in range(2,i+1):
              print(j,end=" ")
          print()

      1
      212
      32123
      4321234
      543212345
```

[]: Q.4) Write a code to accept a number & print its digits in words .
Ex: 321
Three
two
one

```
[16]: num = input("Enter a number: ")
```
